

MattaNutra Questionnaire v6 (Conversational) — IT hand-off

Two drop-in replacements for `/th/nutrition/quiz` and `/en/nutrition/quiz`. Fully self-contained: all Nong Matta images embedded (base64), no build step. Google Fonts (Prompt/Fraunces) load from CDN with system-font fallback.

The only things you need to wire (top of the `<script>` block, `MN_CONFIG`)

- `endpoint` — POST target for the final submission (JSON): `{version, lang, precision, answers:{...}, startedAt, completedAt, sid, events:[...]}`
- `trackEndpoint` — optional, per-question `navigator.sendBeacon` `events: {e, k, v, t, lang, sid}` with `e ∈ view · start · resume · answer · skip · react · section_done · precision_skip · complete · email_capture` → this gives the per-question drop-off funnel v4 never had.

Until endpoints are set, nothing is sent; everything buffers in localStorage: `mn_state_v5` (autosave/resume) · `mn_events_v5` · `mn_submission_v5`.

Data compatibility

All 42 v4 field keys and option values are unchanged (sex, age, reproStatus, menopause, flow, height, weight, skin 1–6, sun, sunscreen, goals, symptoms, sleepHrs, energy, activity, stress, digestion, digCondition, smoking, alcohol, caffeine, diet, `f_` *allergies*, *meds*, *medTypes*, *suppAllergies*, *kidney*, *liver*, *surgery*, *antibiotics*, *supplements*, *budget*, *maxPills*, *form*, *protein*, *family*, *tracker*, *country*, *lab_* + *unit_**, vo2, hrv, firstName, email). New keys: `consentSafety` (bool), `avoid`, `otherMed`, `otherSupp`, `otherTracker` (free text), `precisionGate` ("go"/"skip").

v6 behaviour notes:

- `diet=vegan` auto-fills `f_redmeat/f_fish/f_dairy="never"`, `f_eggs="rare"` (event `autofill` fires; values present in the payload as normal).
- `firstName` is now asked first, not last (same key).

- Extra events: `ack` (micro-acknowledgement bubbles), `autofill` .
- All motion (typing dots, stage moments, leaf bursts) auto-disables for users with `prefers-reduced-motion`.

Before go-live

1. Set the two endpoints above; test payload lands.
2. QA on Android Facebook in-app browser + LINE browser, Thai locale.
3. Thai copy review by pharmacist (still outstanding from v4).
4. Point the LINE button at final OA if it changes (currently @344enooi).
