

MattaNutra · Meta tracking setup

IDs required, how to get them, and keeping UAT separate from Production

The website already has the Pixel and server tracking code. Create the values below and install them on the correct environment only.

Do not cross streams: UAT and Production must use **separate Pixel IDs and CAPI tokens** whenever possible. UAT will not use the production Pixel by default.

1. Values required

Name	What it is	Where
MATTANUTRA_ENV NEXT_PUBLIC_MATTANUTRA_ENV	Runtime label: uat or prd .	Each App Platform app
NEXT_PUBLIC_FACEBOOK_PIXEL_ID	Pixel / Dataset ID (digits).	Client — different per env
FACEBOOK_PIXEL_ID	Same Pixel ID for server CAPI (optional if public one is set).	Server
FACEBOOK_CAPI_ACCESS_TOKEN or _UAT / _PRD	Secret for Conversions API.	Server — different per env
FACEBOOK_CAPI_TEST_EVENT_CODE or _UAT	Test Events code (UAT only).	Server UAT only

2. Pixel ID

- Events Manager → select Pixel / Dataset → copy **Dataset / Pixel ID**.
- Create or use a **UAT Pixel** for testing and a **Production Pixel** for live ads.
- Production default in code (PRD only): **27629903823308584**.
- UAT must set its own ID. Sharing the production Pixel on UAT requires an explicit engineering override.

3. CAPI access token

1. Events Manager → Pixel → Settings → Conversions API → Generate access token.
2. Prefer one token per environment (UAT vs Production).
3. Send as FACEBOOK_CAPI_ACCESS_TOKEN_UAT and/or FACEBOOK_CAPI_ACCESS_TOKEN_PRD (or the plain name on that env only).

Security: Server-only secret. Never put it on the website or in a public env var.

4. Test Event code (UAT)

- Events Manager → Test Events → copy test event code.
- Set only on UAT as FACEBOOK_CAPI_TEST_EVENT_CODE_UAT (or TEST_EVENT_CODE on the UAT app).
- Do not set a test code on Production.

5. Send to engineering

UAT

MATTANUTRA_ENV=uat

NEXT_PUBLIC_FACEBOOK_PIXEL_ID (UAT): _____

FACEBOOK_CAPI_ACCESS_TOKEN (UAT): _____

FACEBOOK_CAPI_TEST_EVENT_CODE (UAT, optional): _____

Production

MATTANUTRA_ENV=prd

NEXT_PUBLIC_FACEBOOK_PIXEL_ID (PRD): _____

FACEBOOK_CAPI_ACCESS_TOKEN (PRD): _____

6. Quick check

- On UAT: finish a quiz → Test Events shows Lead for the **UAT** Pixel only.
- On Production: same flow hits the **Production** Pixel only.
- Opening the quiz alone is not a Lead.

Ads: Leads campaign → optimise for Pixel event **Lead** on the Production Pixel.
