

User Experience and Business Process

This document maps one representative customer through the current MattaNutra journey. It is intended to help the business team refine the process, improve conversion, and identify where the product experience still has gaps.

Status Legend

Status	Meaning
Done	Working in the current product
Partial	Built in part, placeholder, or dependent on another unfinished process
Not Done	Not yet built or not live

Invented Customer

Field	Detail
Name	David
Age	52
Profile	Male, based in Thailand, works long hours, exercises occasionally
Intent	Improve health, energy, and longevity without wasting money
Budget	Medium
Skepticism	Unsure whether supplements are worth it and wary of generic recommendations
Concerns	Evidence, safety, too many pills, hidden costs, whether product choices are trustworthy
Likely conversion trigger	A clear HealthScore, practical next steps, and proof that the plan is specific to him
Likely blocker	Being asked to pay before he understands the value or safety of the recommendation

David's Core Job Story

As a 52-year-old man, I want to improve my health and longevity, but I have a medium budget and I am skeptical of supplement value. I want to see whether MattaNutra can understand my situation, explain what matters most, and give me practical recommendations before I commit to a paid plan.

Sales Funnel Reading of David

David is not a quick impulse buyer. He is likely to convert if the product reduces uncertainty step by step.

Funnel Moment	David's Likely Thought	What Must Happen	Conversion Risk
Landing page	"This might be useful, but is it credible?"	Show personalisation, anonymity, and practical outcomes quickly	He leaves before starting
Assessment	"This is a lot of questions. Is it worth it?"	Keep progress visible and questions easy to answer	He abandons before the HealthScore

Funnel Moment	David's Likely Thought	What Must Happen	Conversion Risk
HealthScore	"Okay, it did understand something about me."	Show one or two specific insights that feel personal	The score feels decorative rather than valuable
Free preview	"I am not paying yet, but I will give an email."	Make the free plan feel useful and low-risk	He gives email but never returns
Precision	"I might pay once if this saves me research time."	Show clear one-time value and trusted product guidance	He delays because product trust is unclear
Pro	"I would subscribe only if this helps me day to day."	Make advisor use cases concrete	Pro feels like a vague upsell
Follow-up	"Has anything actually improved?"	Show score movement and revised next steps	Reassessment feels like marketing, not service

Experience Principles for This User

- Show value before asking for money.
- Make the assessment feel anonymous, respectful, and low-risk.
- Use the HealthScore to create a clear reason to continue.
- Explain why the formulation is specific to him.
- Keep safety and non-medical positioning visible but subtle.
- Give him an easy fallback if he is not ready to pay.
- Use follow-up and chat to keep the relationship alive after the first decision.

Happy Flow Overview

Path 1: Free Preview Journey

David likes the HealthScore but is not yet convinced enough to pay. He chooses the free 3-point nutrition plan by email.

User Intent

- "Show me something useful first."
- "Do not make me buy a full plan before I trust the system."
- "Let me decide later."

Current Path

1. David completes the assessment.
2. His assessment is saved.
3. His HealthScore is generated.
4. He sees the plan gate and chooses the free email option.
5. He enters his email address.
6. He can include a free 60-day reassessment reminder.
7. The shared processing page appears.
8. MattaNutra prepares his example in the background.
9. David lands on an upsell page that says his example is being prepared.
10. The upsell page shows testimonial proof and chat options.
11. MattaNutra prepares the full thinking internally but sends only a limited 3-point example.
12. The email is sent and recorded.
13. If he opted in, a recurring 60-day reassessment reminder is scheduled.
14. The reminder link brings him back with previous answers prefilled.

Free Preview Flow

New version of same plan can be created

Conversion Opportunities

Moment	What David Needs	Business Opportunity
HealthScore gate	Proof the system has understood him	Show the strongest personal insight before the plan choice
Free email capture	Low-risk next step	Make the free plan feel valuable without giving away everything
Upsell page	Social proof and reassurance	Testimonials should address skepticism, age, budget, and practical results
Chat option	Easy human-like continuation	LINE, Telegram, and WhatsApp should carry or request the plan clearly
60-day reminder	Reason to come back	Show score movement and "what changed" as the hook

Satisfaction Tune-Ups

- The free preview should feel complete enough to be generous: three specific actions, not three vague statements.
- The upsell should avoid sounding like "pay or lose access"; it should feel like "your full plan is ready if you want it."
- The email should include one clear next action and one reason to come back.
- The 60-day reminder should reference improvement, not just retaking the quiz.

Gaps Affecting This Journey

- Formal impossible-value and high-risk sanity checks are only partial.
- Live advisor retrieval and conversation flow are not fully connected.
- LINE may not automatically carry the plan reference unless a configured deep link is added.
- The follow-up strategy after the free email is still light.

Path 2: Precision Plan Journey

David sees enough value in the HealthScore and wants a full plan, but he does not want an ongoing subscription.

User Intent

- "Give me the full recommendation once."
- "Make it specific to my age, body, goals, and constraints."
- "Keep it practical and not too expensive."

Current Path

1. David completes the assessment.
2. His HealthScore is generated.
3. He selects Precision Plan.

4. The shared processing page appears.
5. His paid request is treated as higher priority than free examples.
6. The formulation is prepared, refined, saved, and displayed.
7. The results page shows the personalised nutritional formulation.
8. Product recommendation areas can render, but live product matching is not active.
9. Chat options are available from the formulation page.
10. The 60-day reassessment promise needs a reliable email/payment identity path to be fully automatic.

Precision Flow

Conversion Opportunities

Moment	What David Needs	Business Opportunity
Plan selection	Confidence the paid plan is better than the free email	Explain what the full plan unlocks in concrete terms
Payment step	Trust and low friction	Payment must feel familiar, local, and safe
Results page	Practical recommendations	Make dose, timing, expected benefit, and product form easy to scan
Product section	Confidence not to waste money	Product matching should emphasize coverage, quality, and value
Reassessment	Continued value after purchase	Show that the plan can improve as his answers change

Satisfaction Tune-Ups

- The formulation should read like practical guidance, not a dense supplement list.
- Every recommendation should answer: what it supports, how to use it, and why it fits David.
- Product guidance should be conservative and quality-led; a skeptical user will punish anything that feels like affiliate spam.
- The result page should make it easy to take action today, not just understand the plan.

Gaps Affecting This Journey

- Payment collection is not active.
- Live product matching and affiliate purchase are not active.
- Hard safety stop rules and ingredient exclusions are partial.
- Precision reassessment follow-up needs a reliable email source if David did not use the free email path.

Path 3: Pro Plan Journey

David wants ongoing support because he expects his routine, sleep, food, and training to change. He chooses Pro if the AI advisor feels useful and credible.

User Intent

- "Help me adapt this to real life."
- "Tell me what to do when my sleep, travel, training, or diet changes."
- "Do not just give me a static supplement list."

Current Path

1. David completes the assessment.
2. His HealthScore is generated.
3. He selects Pro Plan.
4. The shared processing page appears.
5. The formulation is generated and displayed.
6. The formulation page invites him to connect with the specialist AI supplement advisor.
7. WhatsApp can open with a plan message.
8. Telegram can carry the plan when configured as a bot link.
9. LINE currently may require the user to send the displayed plan manually unless a deeper LINE integration is configured.
10. Returning Pro users can be treated differently and may bypass the paywall when active access is known.

Pro Flow

Conversion Opportunities

Moment	What David Needs	Business Opportunity
Pro plan selection	A reason to subscribe instead of buying once	Show examples of daily advisor use, not just "AI agent included"
Chat CTA	Confidence the advisor knows his plan	Make plan linking invisible or very clear
First chat	Fast, specific help	Start with a tailored welcome using his HealthScore and formulation
Ongoing use	Habit support	Let the advisor adapt to meals, travel, sleep, workouts, and budget
Reassessment	Proof of improvement	Show score movement and revised priorities

Satisfaction Tune-Ups

- Pro should be sold around situations, not features: travel week, poor sleep, new workout block, restaurant meals, low-energy day.
- The first advisor message should make it obvious that the advisor knows David's plan.
- Pro should include proactive check-ins, otherwise the subscription may feel passive.
- The advisor should help reduce complexity, not introduce more tasks.

Gaps Affecting This Journey

- Payment and subscription activation are not live.
- The live advisor retrieval workflow is not fully connected.
- LINE plan handoff needs a proper deep-link or bot flow.
- Pro support promise needs sharper business definition.

Shared Journey Risks

Risk	Why It Matters	Suggested Business Decision
HealthScore does not feel valuable enough	Users may stop before plan selection	Decide which score insight is most persuasive for each user type
Free preview gives too little value	Skeptical users may ignore the email	Define exactly what the 3-point plan includes
Free preview gives too much value	Users may not upgrade	Keep full dose logic, product matching, and ongoing support paid
Payment is not local or trusted	Thai users may abandon	Decide payment provider and supported methods
Product recommendations lack trust	Users may not buy through marketplace links	Build quality signals into product cards
Advisor chat does not carry context	Pro value becomes unclear	Prioritize one channel first and make plan retrieval reliable
Safety rules are incomplete	Scaling creates risk	Finish stop conditions and hard exclusions before high traffic

Funnel Tuning Recommendations

Funnel Stage	Recommended Change	Expected Benefit
Landing page	Add one short proof point near the main CTA: anonymous, personalised, practical	More assessment starts
Assessment	Keep labels short and show progress without making the user feel examined	Higher completion
HealthScore	Lead with David's biggest opportunity and one achievable improvement	Stronger paid-plan intent
Plan choice	Make Free, Precision, and Pro feel like natural levels of support	Less confusion and better self-selection
Free email	Use the free plan to build trust and tee up one paid reason	Better lead-to-paid conversion
Precision	Emphasize research saved, specificity, and product confidence	Better one-time purchase conversion
Pro	Show concrete advisor use cases	Better subscription conversion
Results	Make the first action obvious	Higher satisfaction and lower refund risk
Follow-up	Send score-change framing, not generic marketing	More return assessments

Suggested Conversion Experiments

1. Test whether David converts better when the HealthScore page leads with his weakest domain or his biggest possible score improvement.
2. Test two free-preview offers: "3-point nutrition plan" versus "3 most important next steps".
3. Test whether showing a sample paid formulation section increases Precision conversion.
4. Test whether the Pro plan sells better as "AI supplement advisor" or "ongoing wellness refinement".
5. Test LINE-first chat placement for Thai users and WhatsApp-first placement for English users.

6. Test whether 60-day reassessment consent performs better before or after the free email button.
7. Test whether product quality proof belongs on the plan gate or only on the results page.

Business Questions to Refine Next

- What exact moment should trigger payment: before formulation generation, after a teaser, or after partial formulation?
- Should every paid user provide an email before payment so reassessment follow-up is reliable?
- How much of the formulation should the free email reveal?
- Which one chat channel should be made excellent first?
- What proof will convince a skeptical 52-year-old that the plan is not generic?
- Should Pro include guaranteed human review for edge cases, or only AI advisor support?
- What does success look like after 60 days: higher HealthScore, repeat purchase, Pro upgrade, or chat engagement?
