

MattaNutra Business Process Roadmap

This document distills the business process from the revised roadmap and maps it to the current product state. Technical choices, vendor details, credentials, hosting decisions, and implementation mechanics have been removed.

Status Legend

Status	Meaning
Done	Already working in the current product
In Progress	Partly built or present as a placeholder
Pending	Not yet built
Decision Needed	Business decision or external dependency required

Current State Summary

MattaNutra already has the core assessment-to-formulation journey working. A customer can land on the site, complete an anonymous assessment, select a plan level, and receive a personalised nutritional formulation generated from their answers.

The main missing business pieces are payment activation, product matching, affiliate purchase links, safety governance, and ongoing customer follow-up.

Business Area	Current State	Status
Brand and website	MattaNutra branding, English and Thai pages, legal pages, footer, and core site navigation exist.	Done
Anonymous assessment	Questionnaire captures profile, goals, lifestyle, preferences, and constraints.	Done
Assessment sanity check	Basic impossible values and stop conditions still need a formal business path.	In Progress
Assessment storage	Assessment answers are saved before payment so abandoned paywall users are still captured.	Done
Plan selection	Customer can choose Precision or Pro before formulation processing.	Done
Formulation generation	Assessment answers are processed and return a personalised formulation.	Done
Formulation storage	The final formulation is saved before the results page renders it.	Done
Bilingual result display	Formulation fields can be returned and shown in English or Thai.	Done
Product recommendations	Result page handles recommendations, but live product matching is not yet active.	In Progress

Recommendation storage	Recommendation versions can be saved, but live matched content is not yet active.	In Progress
Chat support	Chat CTA exists, but live advisor workflow is not fully connected.	In Progress
Payment	Plan selection exists, but payment collection is not yet active.	Pending
Payment abandonment	Assessment is saved first, but abandoned-payment follow-up is not yet active.	Pending
Affiliate purchase journey	Business model is affiliate-led, but affiliate product links are not yet live.	Pending
Safety governance	Disclaimers and legal pages exist; dosing rules, exclusions, and practitioner review are still needed.	In Progress
Social operations	Social presence and inbound handling remain a business operations task.	Pending
Follow-up and retention	Reassessment, reorder, and lifecycle messaging are not yet active.	Pending
Admin and reporting	Operational dashboard and funnel reporting are not yet active.	Pending

Target Customer Journey

Business Process Gates

Operating Model

Simplified Process Detail

1. Brand and Trust

Purpose: make MattaNutra look credible enough for a customer to start the assessment.

Current state: website, brand, English and Thai pages, privacy policy, terms, and wellness disclaimers are in place.

Next business work:

- Finalise social handles.

- Ensure the public website includes enough information for payment and affiliate review.

- Add a simple contact route for customer trust.

2. Assessment

Purpose: collect enough anonymous information to personalise the formulation.

Current state: built and working.

The assessment captures:

- Profile basics.

- Region.

- Goals.

- Lifestyle.

- Diet.

- Medication and supplement considerations.

Preferences such as budget and capsule limit.

Next business work:

- Review all questions for regulatory sensitivity.

- Confirm any values that should stop the process and route to human review.

- Confirm the customer-facing message when the sanity check fails.

2.1 Questionnaire Sanity Check

Purpose: catch impossible, contradictory, or high-risk answers before taking payment or preparing a formulation.

Current state: partially defined. The assessment has required fields, but the formal failed-sanity path still needs to be completed.

The sanity check should catch:

Impossible profile values.

Missing required answers.

Contradictory answers.

Joke or clearly unusable submissions.

If the sanity check fails:
High-risk answers that should not continue automatically.

1. If the issue is fixable, ask the customer to correct the answers.
2. If the issue is high-risk, stop the automated journey and route to human review.
3. Do not take payment until the assessment passes or is approved for continuation.

3. Plan and Payment

Purpose: convert the assessment into a paid or supported plan.

Current state: plan selection exists. Payment is not connected.

Planned plans:

Plan	Business Promise
Precision Plan	Full personalised formulation and product guidance.
Pro Plan	Precision Plan plus ongoing AI advisor support and refinement.

Next business work:

Confirm pricing.

Confirm refund policy.

Activate payment acceptance.

Decide what happens if payment fails or is abandoned.

Use the saved assessment to support a respectful follow-up if the customer abandons payment.

4. Formulation

Purpose: turn assessment answers into a clear wellness formulation.

Current state: working. The formulation is prepared, saved, and then rendered on the results page.

The formulation result should remain:

Concise.

Bilingual.

Tied to the customer assessment.

Safe in tone.

Free of disease-treatment claims.

Next business work:
Saved before it is displayed to the customer.

Add formal safety review rules.

Define when a customer should be shown a consult a qualified professional message instead of a formulation.

Identify the qualified reviewer for formula logic and compliance sign-off.

5. Product Matching

Purpose: translate the formulation into trustworthy products the customer can buy.

Current state: not active yet. The result page can gracefully show no products.

Target process:

1. Maintain a curated list of trusted products.
 2. Match products to formulation ingredients.
 3. Prefer fewer products when one product covers multiple ingredients.
 4. Save the matched recommendation set.
 5. Show clear product rationale.
 6. Send the customer to marketplace purchase links.
- Next business work:

Confirm first ingredient scope.

Build the initial trusted product list.

Confirm affiliate approval and link rules.

Define product quality standards.

6. Safety and Compliance

Purpose: keep the service in the wellness category and reduce avoidable risk.

Current state: legal pages and disclaimers exist. Hard safety rules are still needed.

Business rules to define:

Conditions that stop formulation generation.

Ingredients that should be excluded for pregnancy, medication conflicts, age, or serious health conditions.

Maximum daily supplement amounts.

Human review triggers.

How long records should be retained.
Safety should be treated as a hard gate, not a warning at the end.

7. Advisor Support

Purpose: give customers a way to continue the conversation after receiving their plan.

Current state: advisor CTA exists. The live chat workflow is not complete.

Target process:

Customer opens preferred chat channel.

Customer shares their plan reference.

Advisor retrieves the customers plan.

Advisor helps refine timing, routine, travel, diet, and practical use.
Next business work:

Confirm which chat channels launch first.

Confirm advisor behaviour and escalation rules.

Define what support is included in each plan.

8. Retention and Operations

Purpose: turn a one-time formulation into an ongoing relationship.

Current state: not active.

Target process:

Follow up after purchase.

Prompt reassessment.

Support reorder decisions.

Track customer outcomes.

Review conversion and retention metrics weekly.

Current MVP Gap Map

Gap	Why It Matters	Suggested Priority
Payment activation	Required for paid conversion.	High
Affiliate approval and link setup	Required for revenue from product purchases.	High
Product whitelist	Required for trustworthy recommendations.	High
Safety stop rules	Required before scaling traffic.	High
Qualified reviewer	Reduces compliance and trust risk.	High
Live chat workflow	Needed for Pro Plan value.	Medium

Social launch	Needed for low-cost customer acquisition.	Medium
Follow-up and reassessment	Needed for retention and repeat use.	Medium
Admin reporting	Needed once traffic begins.	Medium

Recommended Next Sequence

1. Finish payment readiness.
2. Confirm affiliate onboarding and marketplace link rules.
3. Build the first trusted product list.
4. Add safety stop rules and ingredient exclusion rules.
5. Connect product matching to the result page.
6. Make advisor chat work for one channel first.
7. Add follow-up and reassessment messages.
8. Add basic operational reporting.

Open Business Decisions

Decision	Needed Because
Final pricing for Precision and Pro	Required before payment launch.
First product category scope	Keeps product matching manageable.
Qualified reviewer	Needed for formulation logic and claim review.
Support promise for Pro	Defines what customers are buying.
Product quality standard	Protects trust and reduces poor recommendations.
Stop-condition policy	Defines when MattaNutra should not generate a plan.

One-Line Business Process

MattaNutra captures an anonymous wellness assessment, turns it into a personalised nutritional formulation, connects that formulation to trusted purchasable products, and supports the customer over time through reassessment and advisor-led refinement.
